tangent

HiFi 200

AMAZING PERFORMANCE..!

GREAT ALONE, BETTER TOGETHER

Collecting a number of excellent audio components is a task often reserved for the most die-hard audio aficionados. Thankfully, we have quite a handful of them working for us at Tangent. Their recent creation, the Tangent System 200 brings their passion for performance to life. We recommend welcoming it into your home.

The four components of the Tangent System 200 are great on their own, and better when together. At the heart of the system, the mighty AMP-200 delivers playback power from its twin 100 watt amplifiers. A subwoofer output and manually adjustable crossover filter allows you to fine tune performance preferences to your liking. The four gold plated speaker terminals secure an optimal speaker connections and sound in all external speakers.

The robust CDP-200 CD-player gives it's all in the pursuit of audio perfection. Playback possibilities include CD-A, CD-R and CD-RW. An optical output lets you connect to a digital system of your choice to enjoy pure digital sound all around.

- Radio station tuning is handled by your choice of the DAB-200 Digital Audio Broadcasting tuner or a TNR-200 AM/FM tuner. Both feature the same outstanding Tangent quality you've already become to love.

All Tangent System 200 components are available as separates, and if you search for DVD, SACD or DVD-A playback options, tangent also has the solution with the DVD-200.
